

## dtmMANAGER|Description

The *dtmMANAGER* is a robust Visual C++ development library for device, gateway and communication DTMs according to the FDT specification V1.2 and V1.2.1. The development of custom DTMs is much easier and more efficient than from scratch. The development toolkit contains source code samples for a communication and a device DTM. The sample source code can be used as a starting point for own development projects. The combination of *dtmMANAGER* and sample DTMs will ease you into the FDT Technology and DTM development. The library will be continuously amended upon new releases of the FDT specification.

## M&M|About Us

M&M is a company dealing with information technology in the world of industrial automation. Well known German and international customers, who develop state of the art technologies, who have complex architectural systems and who need in-depth consultancy services prior to development projects, frequently call on the services of M&M Software GmbH.

## → dtmMANAGER|Features

- Easy to develop state-of-the-art user interfaces according to the DTM style guide
- Support for communication, gateway and device DTMs
- Development of the DTMs according to the FDT specification 1.2 and 1.2.1
- Fully implemented DTM state machine
- Tutorial and programmers guide with sample DTMs in source code
- Supports multi-lingual graphical user interface
- Built-in support for various communication protocols
- Support for Visual Studio version 6 and higher
- Wizards for Visual Studio 2005 and higher
- Provision of new releases and service packs with delivery via download
- Support by phone and email available
- Workshop available

## → dtmMANAGER|Advantages

- Hides the complexity of FDT
- Fast and easy introduction to DTM development
- Prevents many certification related mistakes during development
- Mature and field proven product
- Saves time by eliminating routine tasks during development
- Continuous maintenance and support available
