

## fdtCONTAINER|Description

The *fdtCONTAINER application* is a powerful FDT compliant host application, which is easily adjustable to specific requests from customers. Internally, the application uses the *fdtCONTAINER component*, profiting from a robust implementation of the FDT specification, which has been tested against a variety of available DTMs. Version 2.x is also based on a tried and proven application framework. Apart from the visual advantages, this application framework also offers a powerful plug-in architecture which allows the integration of specific adjustments and expansions. With these features, the time and costs associated with upkeep and maintenance is limited to specific adjustments only.

## M&M|About Us

M&M is a company dealing with information technology in the world of industrial automation. Well known German and international customers, who develop state of the art technologies, who have complex architectural systems and who need in-depth consultancy services prior to development projects, frequently call on the services of M&M Software GmbH.

## → fdtCONTAINER|Features

- Implements FDT container behavior
- FDT 1.2.1 support
- Multi-language support
- Logging capabilities
- Based on .NET Framework
- Basis for *dtmINSPECTOR*
- Integrated plug-in / add-in / module system
- Extendable functionality and feature-set (plug-ins)
- Easy to use and customizable state-of-the-art user interface

## → fdtCONTAINER|Advantages

- Independent of communication / Fieldbus type and hardware
- Best FDT frame application in the 2006 interoperability test
- Certified for Window Vista
- Open for individual further development
- No limit for innovative product ideas
- Less development effort compared to conventional environments
- Its high level of quality decreases costs associated with support and quality assurance
- Eliminates interoperability problems
- Decreases maintenance costs
- Development support available through M&M Software
- No membership required
