

fdtCONTAINER|Description

The *fdtCONTAINER component* enables you to make existing or newly developed Windows applications FDT compatible. The component encapsulates a very powerful set of .NET-Interfaces, which can be implemented in your .NET application without having to worry about details of the FDT specification. The component easily integrates all FDT conform DTMs. It is also ready for FDT 1.2.1. The user interfaces (e.g. DTM catalogue) are replaceable with proprietary implementations, if necessary. The component can be used for simple single-station applications (e.g. *fdtCONTAINER application*), as well as in distributed multi-user-systems on database basis.

M&M|About Us

M&M is a company dealing with information technology in the world of industrial automation. Well known German and international customers, who develop state of the art technologies, who have complex architectural systems and who need in-depth consultancy services prior to development projects, frequently call on the services of M&M Software GmbH.

→ *fdtCONTAINER*|Features

- Microsoft .NET assembly developed with C#
- Comfortable .NET API for easy integration
- Integrates all FDT details and FDT-COM-Interfaces in one component
- Link to the personal data management (e.g. database) available
- Link to personal user interfaces available
- Multi-station-operation possible
- Support of crash reports and protected mode
- Compatible with all FDT conform DTM
- Assured upkeep and maintenance for new standard releases
- Tutorial for quick training
- Support contract available

→ *fdtCONTAINER*|Advantages

- Independent of communication / Fieldbus type and hardware
- Open for individual further development
- No limit for innovative product ideas
- Less development effort compared to conventional environments
- Its high level of quality decreases costs associated with support and quality assurance
- Eliminates interoperability problems
- Decreases maintenance cost
- Development support available through M&M Software
- No membership required
